APPLICATION: Upgrading my Focal Electra 1028be 2 speakers.

This is the second time I'm upgrading speaker crossover parts, but I have not posted any reviews yet. First time was when I was upgrading Troels Gravesen speakers and now I'm upgrading my Focal Electra 1028be 2 speakers. I have now built external crossovers for the Focals. At the moment I have Mundorf supremes on the tweeter and I'm not happy with the sound. That's why I'm trying Weet caps instead. I know how Jantzen alumens sound. I could post my thoughts about the Weet to some other hifi forum too.

They are sounding good. I am not a professional speaker builder but I will post a review soon. I still have some work to with these speakers.

TESTING RESULT:

I ordered Weet WMH 8.2uf capacitors for my Focal 1028be 2 speakers. I have completely rebuild the crossovers and they are external now. Before the Weet caps I had Mundorf Supreme caps but I was not happy with those caps. The sound was a bit dull and the timbre was not good. Now with the Weet caps everything sounds alive and timbre is very natural. I have used Jantzen Alumen Z caps before and I would say that the Weet WMH caps sounds exactly the same. Maybe Weet has a bit brighter tone but not much. I am happy with the Weet caps, no need for anything else

From Johan Juutinen, Finland

ABOUT WEET AUDIO CAPACITORS:

WEE Technology Company Limited is specialized in manufacturing MKP film and aluminium/copper foil audio capacitors for more than 20 years history. WEET adopt the key techniques from Taiwan factories and the main material are all imported from Japan and European counties. WEET pursuit the highest level in crossover audio circuit and we believe WEET is ready to compete with overseas brands. You deserve to have the best quality audio capacitors.
