

## WMH Were Clearly Better Than in the Capacitors of Sonor Audio Test Review

### WEET SAMPLES :

WMH Pure Aluminum Foil and Film Polypropylene Capacitors 2.2uF 4.7uF 100V and 10uF 100V

**APPLICATION:** Changed the capacitors in the cross over of the Claro 6.2 (by Sonor Audio).

**PHOTOS BEFORE :** original cross over:

**PHOTOS AFTER:** modified cross over:

**TESTING RESULT:**

After long intending to do, we now finally changed the capacitors in the cross over of the Claro 6.2 (by Sonor Audio).

As mentioned earlier, we were not able to learn, what caps the company has used. They refused any information. So we could only measure the values and then ordered the caps (WMHs) we needed from you last year already.

Well, now we put them in place and started listening.

First we were overloaded with pronounced high frequencies (same as we experienced with the Focals before) but also together with a lot more details compared to the original caps that came with Sonor Audio.

It was like lifting a thick curtain, but despite the very positive effect there were - as mentioned - to many highs. So we let the speakers run continuously for some days. The pronounced highs disappeared after 3-4 days and now we have a very much more detailed sound, more transparency, more spatial depth, much more information compared to the original. A much more lively presentation over all. Much more pleasure for ears and mind.

So (once more!) it was a good thing to replace all the caps with your WMHs, but they need a run in time of about a week. That is an absolute must !

By the way we also measured the usual specs of the Caps, ESR, Dissipation Factor, tangent delta, Q factor ... All values of the WMHs were clearly better than in the Caps of Sonor Audio.

So there is no doubt that your caps are a lot better regarding measurements and sound quality as well. We only can recommend speaker owners to change to your capacitors before any considerations of new speakers !

At last we send you some pictures before and after the change.

Once again we are impressed of the high quality of your products.

--- From Hubert, Germany

### **ABOUT WEET AUDIO CAPACITORS:**

WEE Technology Company Limited is specialized in manufacturing MKP film and aluminium/copper foil audio capacitors for more than 20 years history. WEET adopt the key techniques from Taiwan factories and the main material are all imported from Japan and European countries. WEET pursuit the highest level in crossover audio circuit and we believe WEET is ready to compete with overseas brands. You deserve to have the best quality audio capacitors.
